

B.Sc. Chemistry

Bachelor of Science in Chemistry is a three year semester course designed for the students to get a deep insight in to the different branches of chemistry. This course also gives the students a knowledge not only of the conventional areas but also of the frontier areas of chemistry like computational chemistry, supramolecular chemistry, green chemistry and nano chemistry. It prepares the students to take up their master's degree and also handle jobs in the industries. Chemistry is a subject that offers solutions to a lot of problems we encounter in our day to day life and there is ample scope for students to take up research in the areas of removal of oil spill, drug designing, drug delivery, drug synthesis, preparation of new materials etc.

Career opportunities after B.Sc. Chemistry:-

- Chemist
- Toxicologist
- Bio chemist
- Cytologist
- Pathologist
- Researcher
- Lecturer
- Genetecist
- Clinical research specialist
- Radiologist
- Lab assistant

In top companies like SRF Ltd, Reliance industries ltd, Gujarat fluoro chemicals, Gharda chemicals, Cipla, Glenmark pharmaceuticals, Bioc on, Tata chemicals, Malabar cements, Titanium Travancore limited etc
